

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A device for communication, comprising:

an optical sensor to capture an image; and

a processor, the processor configured to automatically identify a plurality of possible classes of data in the image by decoding and analyzing pixels in the image, the processor identifying a class of data in the image of the plurality of classes of data and automatically performing a predetermined function associated with the class of data including performing commands contained in the image in response to the class of data being identified in the image, each of the plurality of possible classes of data having an associated predetermined function,

wherein the predetermined function comprises at least one of transmitting a signal to order a product or service, decoding data from one or more images to reprogram a communication device or downloading communication device setup parameters, and

wherein the plurality of possible classes of data comprise data visible to a human eye and data unintelligible to a human eye comprising at least one of subliminal data, data formed using steganography, or watermarking.

2. (Original) The device of claim 1, wherein the optical sensor comprises one of a charge coupled device, a complimentary metal oxide semiconductor (CMOS) and a camera.

3. (Original) The device of claim 1, further comprising a data structure including computer-executable instructions executable by one of the optical sensor and the processor to decode pixels in the image to identify or select the associated class of data.

4. (Canceled)

5. (Previously Presented) The device of claim 1, further comprising a display to display at least one of the image and the class of data.

6. (Canceled)

7. (Previously Presented) The device of claim 1, wherein the plurality of possible classes of data comprise at least one of a phone number, a list of phone numbers, a bar code, access information to a web site, a sequence of commands, and information associated with a product or service.

8. (Original) The device of claim 7, wherein the sequence of commands comprises commands to be performed automatically by a communication device.

9. (Original) The device of claim 8, wherein the communication device comprises a cellular telephone.

10. (Original) The device of claim 7, wherein the sequence of commands comprises commands to be performed by a communication device in response to a password.

11. (Original) The device of claim 10, wherein the communication device comprises a cellular telephone.

12. (Original) The device of claim 10, further comprising at least one of a user interface and a voice recognition function to enter the password.

13. (Original) The device of claim 1, wherein the optical sensor is operable to capture the image from one of a television, a video monitor, and a fixed medium.

14. (Canceled)

15. (Currently Amended) The device of ~~claim 14~~claim 1, wherein transmitting a signal to order a product or service comprises sending one of a short message service (SMS) message, email message, or voice or data message, each including information associated with a purchaser.

16. (Original) The device of claim 1, further comprising a user interface to at least one of select the class of data from the image, edit the class of data, store the class data and transmit the class of data.

17. (Currently Amended) A device for communication, comprising:

an optical sensor to capture an image;

a processor, wherein a data structure operable in association with one of the optical sensor, the processor and a mobile system includes computer-executable instructions capable of automatically identifying a plurality of possible classes of data in the image by decoding and analyzing pixels in the image, the computer-executable instructions identifying a class of data in the image of the plurality of possible classes of data;

another data structure operable in association with the processor to automatically perform a predetermined function associated with the class of data including performing commands contained in the image in response to the class of data being identified in the image, each of the plurality of possible classes of data having an associated predetermined function; and

a transmitter to transmit signals in response to the class of data,

wherein the predetermined function comprises one of transmitting a signal to order a product or service, decoding data from one or more images to reprogram a communication device or downloading communication device setup parameters, and

wherein the plurality of possible classes of data comprise data visible to a human eye and data unintelligible to a human eye comprising at least one of subliminal data, data formed using steganography, or watermarking.

18. (Original) The device of claim 17, wherein the data structure operable in association with one of the optical sensor, the processor and the mobile system includes

computer-executable instructions executable by one of the optical sensor, the processor and the mobile system to decode pixels in the image to identify or select the class of data.

19. (Original) The device of claim 17, further comprising a storage device to store at least one of the image and the class of data.

20. (Original) The device of claim 17, further comprising a display to display at least one of the image and the class of data.

21. (Original) The device of claim 20, further comprising at least one function button to select the class of data from the image.

22. (Original) The device of claim 21, further comprising a pointing device to select the class data from the image.

23. (Original) The device of claim 17, further comprising a user interface to at least one of select the class data from the image, edit the class of data, store the class of data and transmit the class of data.

24. (Original) The device of claim 17, wherein the class of data comprises at least one of a phone number, a list of phone numbers, access information to a web site, a sequence of commands, and information associated with a product or service.

25. (Canceled)

26. – 31. (Withdrawn)

32. (Currently Amended) A method for communication, comprising:
capturing an image;
automatically identifying a class of data in the image of a plurality of possible classes of data by decoding and analyzing pixels in the image; and

automatically performing a predetermined function associated with the class data including performing commands contained in the image in response to the class of data being identified in the image, each of the plurality of possible classes of data having an associated predetermined function,

wherein performing the predetermined function comprises one of transmitting a signal to order a product or service, decoding data from one or more images to reprogram a communication device or downloading communication device setup parameters, and

wherein the plurality of possible classes of data comprise data visible to a human eye and data unintelligible to a human eye comprising at least one of subliminal data, data formed using steganography, or watermarking.

33. (Original) The method of claim 32, further comprising decoding pixels in the image to identify or select the class of data.

34. (Original) The method of claim 32, further comprising displaying at least one of the image and the class of data.

35. (Original) The method of claim 32, wherein identifying or selecting the class of data comprises identifying at least one of a phone number, a list of phone numbers, a bar code, access information to a web site, a sequence of commands, and information associated with a product or service.

36. (Original) The method of claim 35, further comprising performing the sequence of commands automatically.

37. (Original) The method of claim 35, further comprising performing the sequence of commands in response to a password.

38. (Original) The method of claim 35, further comprising receiving the password via at least one of a voice recognition system and a user interface.

39. (Canceled)

40. (Currently Amended) The method of ~~claim 39~~claim 32, wherein transmitting a signal to order a product or service comprises sending one of a short message service (SMS) message, an email message, or a voice or data message, each including information associated with a purchaser.

41. (Currently Amended) The method of ~~claim 39~~claim 32, further comprising retrieving purchaser information from a data source in response to transmitting a signal to order a product or service.

42. (Original) The method of claim 32, further comprising at least one of selecting the class of data from the image, editing the class of data, storing the class of data and transmitting the class of data.

43. – 47. (Withdrawn)

48. (Currently Amended) A computer-readable medium having computer-executable instructions for performing a method, comprising:

capturing an image;

automatically identifying a class of data in the image of a plurality of possible classes of data by decoding and analyzing pixels in the image; and

automatically performing a predetermined function associated with the class of data including performing commands contained in the image in response to the class of data being identified in the image, each of the plurality of possible classes of data having an associated predetermined function,

wherein performing the predetermined function comprises one of transmitting a signal to order a product or service, decoding data from one or more images to reprogram a communication device or downloading communication device setup parameters, and

wherein the plurality of possible classes of data comprise data visible to a human eye and data unintelligible to a human eye comprising at least one of subliminal data, data formed using steganography, or watermarking.

49. (Original) The computer-readable medium having computer-executable instructions for performing the method of claim 48, further comprising decoding pixels in the image to identify or select the class of data.

50. (Original) The computer-readable medium having computer-executable instructions for performing the method of claim 48, wherein identifying or selecting the class of data comprises identifying at least one of a phone number, a list of phone numbers, a bar code, access information to a web site, a sequence of commands, and information associated with a product or service.

51. (Original) The computer-readable medium having computer-executable instructions for performing the method of claim 50, further comprising performing the sequence of commands automatically.

52. (Original) The computer-readable medium having computer-executable instructions for performing the method of claim 50, further comprising performing the sequence of commands in response to a password.

53. (Canceled)

54. (Currently Amended) The computer-readable medium having computer-executable instructions for performing the method of ~~claim 53~~claim 48, wherein transmitting a signal to order a product or service comprises sending one of a short message service (SMS) message, an email message, or a voice or data message, each including information associated with a purchaser.
